## COMPETITIVE ADVANTAGE

1. Rigid Yet Flexible:

Electrical connection error or solder crack are very common problems found in conventional LED strips that uses flexible PCB. In order to eliminate these problems, V-Flex incorporates overmoulded polymer between pre-wired fixtures, thus greatly enhances product reliability and at the same time achieving uniform lighting effect that are free of dark spots in the typical cove application. The overmoulded polymer can be twisted and bent up to 180° at all X.Y.Z (omnidirectional) directions, further enhance the flexibility of application.

Overmoulded polymer at every end-cap

2. Minimized Risk of Dark-Spot at Fixture-to-Fixture Joint Area:

Cuttable on Site (at every L190mm)

50mm away from the wall surface  
→ Perfect uniformity / No dark spot

3. Reliable NICHIA, Single & Center Colour Binning:

Nichia Chromaticity Diagram: Brownie Ecotronic is using the 3-Step MacAdam Centre Binning to ensure the excellent color consistency of our LED.

4. Cuttable at Every L190mm Module Unit

5. Reverse Polarity Protection Circuit Built-in

Conventional Mounting Method for Curved Ceiling Cove

Brightness enhanced by approx. 40% (=Minimized Energy)
